

ENERGY & RENEWABLE RESOURCES

“Our Energy & Renewable Resources Team is dedicated to bringing the future of renewable energy to Virginia. We guide clients through the changing landscape of renewable technologies, help them successfully navigate new developments, new business practices, and new legislation, and ultimately transform the alternative energy industry in the state.”

WHO WE ARE

The Energy & Renewable Resources lawyers at Kaufman & Canoles help clients succeed in the rapidly evolving business and regulatory environment for alternative energy and renewable technologies in Virginia.

HOW WE HELP

Our lawyers draw upon their diverse backgrounds – in real estate, land use, commercial law, eminent domain, regulatory, tax, mergers and acquisitions, and environmental law – to provide a full range of services to clients on both large and small energy projects throughout the state. We help landowners price and negotiate the lease and sale of their property to alternative and traditional providers. We advise renewable energy companies on planning, permitting, developing, managing, structuring, financing, and selling their projects.

Our experience representing the full spectrum of renewable energy participants – property owners, developers, financiers, regulatory bodies, power purchasers, and power providers, including in particular, wind and solar companies – affords us a unique perspective on success. We know what it takes to get deals done throughout the Mid-Atlantic while minimizing controversy and risk, mitigating cost, and broadening success.

Clients appreciate the personal involvement of our lawyers in their projects. They know we’re committed to helping them achieve their business, strategic, and financial objectives and rely on our leadership and guidance to inform their decisions.

WHO WE REPRESENT

Our Energy & Renewable Resources attorneys represent a broad range of clients, from individual landowners to renewable energy startups to large, established power providers where we typically work with executives, vice-presidents of development, project managers, and others responsible for completing a variety of projects.

We have particular strengths in the following sectors:

- Solar Power
- Onshore and Offshore Wind Power
- Natural Gas Pipelines

AREAS OF CONCENTRATION

- Solar energy
- Onshore and offshore wind
- Advisement on renewable technologies
