ARTIFICIAL INTELLIGENCE

"In an era of rapid technological transformation, our law firm stands at the forefront of AI legal strategy, offering comprehensive counsel that bridges cutting-edge technology with robust legal expertise."

WHO WE ARE

Our Artificial Intelligence team is a multidisciplinary group of legal professionals equipped to navigate the complex and rapidly evolving legal landscape surrounding AI technologies. As artificial intelligence moves from the realm of buzzwords to a transformative force contributing trillions to the global economy, our group is uniquely positioned to help businesses capitalize on their potential while addressing critical legal and regulatory challenges. With expertise across corporate and transactional law, the team assists clients in incorporating AI into mergers, acquisitions, and joint ventures, while also providing strategic counsel on AI licensing agreements and investments in AI startups. Our risk mitigation strategies help businesses navigate the intricacies of AI-driven operations, from data collection and database maintenance to protecting AI's insights and creative byproducts. Additionally, our group offers data privacy and security counsel to ensure compliance with regulations like GDPR and CCPA, address data breach liabilities, and develop ethical frameworks for AI model training.

HOW WE HELP

Our team's capabilities extend to intellectual property law, addressing cutting-edge issues such as patentability of AI algorithms, trade secrets protection, copyright disputes involving AI-generated works, and safeguarding trademarks for AI-branded offerings. As AI reshapes industries, our team provides robust litigation and dispute resolution services, tackling challenges like DMCA takedown disputes, conflicts over training data, and disputes regarding AI platforms and copyright infringement. We also guide clients through emerging federal, international, and industry-specific regulations, ensuring compliance across industry sectors like healthcare, finance, and manufacturing. Furthermore, our team addresses employment and labor law implications of AI, including algorithmic bias in hiring processes and privacy concerns with AI-driven workplace tools. Our team has deep technical knowledge combined with legal expertise, empowering clients to responsibly and effectively navigate AI's revolutionary impact on the global economy.

Clients appreciate our comprehensive approach and unwavering commitment as we help organizations navigate the complex AI landscape, manage technological risks, and leverage AI's potential while maintaining integrity and security.

HOW WE HELP (CONT.)

Our AI advisory services include:

- Corporate and Transactional Law
  - Corporate transactions involving AI technology
